A collection of competencies

For some fifteen years, our architects, engineers and oenologists have united their competencies as a consultancy agency for the design, planning and redevelopment of wine cellars both in the South of France and abroad.

Relating as much to private quarters (main house, attractive gardens, swimming pools,...) as the technical buildings and cellars (vinification, maturing in barrels, conditioning, bottle ageing, agricultural buildings,...), our mission begins with :

- # An audit of the existing property
- # An analysis of your needs
- # The integration of your objectives

This reflection begins with the proposal of a global project (lay out, plans, costings, synthesis images) with its possible phasing based on priorities, the development of the viticultural potential, commercial development, town planning constraints,...

The mission continues with the execution and supervision of carcassing works, the equipment, exterior planning, design, interior decoration, and environmental aspects.

With more than 100 references, our collection of competencies are applicable to properties and chateaux, vineyard cooperatives, negociants or producers' groups.
